

**Zap**—cuts extreme highs when turned down

**Switch**—  
Chooses  
frequency  
of Zap  
control,  
Fizz is  
highest,  
Crackle  
lowest

**Output Jack**—connect to the  
next pedal's input or FX Return

**Input Jack**—from previous  
effect, or amp's FX Send

## Tips & Tricks:

- The highs may sound better with lower settings of the DeFizzerator™, and brighter amp settings. This can cut through better, without sounding harsh.
- Set Amptweaker loops to Post for the most effect with the DeFizzerator
- The Fizz setting is VERY high, and may not be audible with some speakers

## Specs:

- Passive EQ impedance: 10K Ohm, must be driven from a buffer, other pedals, amp's FX send or active pickups...won't work well right after hi-z guitar pickups
- May drop volume a bit when set on Crackle
- Dimensions: 3.7"W X 1.5"D X 2"H
- No batteries needed
- Weight: 5 ounces
