

AME-100

Intelligent Multi-Effects

AME-100 Major Firmware Upgrade

AME-100 ushers in a groundbreaking firmware update with two core features fully upgraded, breaking creative boundaries and expanding sonic possibilities. Every user now enjoys greater freedom and a more professional tone-tuning and music creation experience!

Major Update 1: PC Host Software Now Fully Compatible with Third-Party NAM File Import

This update unlocks powerful new compatibility: the AME-100 PC host software now fully supports third-party NAM file import, completely breaking free from native resource limitations. Compatible with a wider range of tone files, it greatly enriches your tone library and removes all restrictions from your creative workflow!

Operation Steps:

1. Visit the AUDOTA official website: en.audota.com
2. Download and install the latest version of the AME-100 PC host software;
3. Connect your AME-100 device to your computer using a USB Type-C data cable according to the device interface specifications. Open the host software and click [Connect Now] to complete device pairing;
4. Once the device is connected, click the NAM plug-in download button at the top of the page to automatically download and install the plug-in;
5. After the plug-in installation is complete, you can load third-party NAM files with one click and freely import various tone resources.

How to Import NAM Files

1. Click the [+] button
2. Select the NAM file
3. Open the selected NAM file and wait for the import to complete.
4. After successful import, you can select and adjust the tone on the mobile app or the device.

Notes

Currently, only A1 model import is supported!

Major Update 2: Editable Presets Expanded to 200 Slots

In response to user demands for preset storage, this version delivers a major capacity upgrade! The number of editable presets on the AME-100 has been officially increased to 200, providing ample storage space to accommodate custom tone parameters for various scenes and styles—say goodbye to the frustration of insufficient preset capacity.

With abundant preset storage combined with the newly unlocked freedom to load third-party NAM files, these dual advantages completely open up a new dimension of tone creation. Users gain boundless space for tone exploration, tuning, and creation—easily unlocking diverse tone possibilities and building a personalized tone system of their own!
