

**V-602**

## **WARRANTY:**

All Big Joe products are proudly designed, engineered and built in the USA. We hand test, assemble and inspect every stomp box that we ship. If there is ever a problem that is our fault, we will fix it free of charge. If the problem is from normal wear and tear then we will fix it for free but charge you for the replacement parts. If the problem is something you did then we will fix it and charge you whatever it costs to do so. The only thing we ask is that you don't attempt to fix anything yourself. There are no user serviceable parts inside the case. It's that simple. Just register your warranty online or send in the attached Registration Card so we have you on file.

**VOLUME + BOOST PEDAL**

**V-602**

## BASIC OVERVIEW:

Big Joe Volume pedal is a buffered, true bypass, active design with 3-positions function switch that allows you to choose various boost and cut configurations. The circuitry is capable of driving both high and low impedance loads. An On/Off LED indicates when pedal is engaged.

## MODE SELECTION SWITCH:

## NORMAL MODE:

In Normal mode, pedal operates like the volume control on your guitar. Roll forward to increase volume, roll back to turn off/reduce volume. There is no gain boost in this setting.

## -12 DB MODE:

In this mode rolled back position is set to -12 db. It does not go to full off. This limits the amount of cut and gives you a much finer control of the volume level. This allows you to adjust guitar level in the mix. It is great for pulling your guitar signal out of the mix on guitar solos.

## PROGRAM MODE:

In program mode you are able to customize the amount of boost and cut you get when you roll the pedal forward and back. Rotary pots on bottom allow you to choose between 6db and 18db of gain or -6db to signal off (max) cut. Amount of cut is relative boost level selected.

## POWER SUPPLY:

All Big Joe products operate with a standard 9v Alkaline battery or tip negative 9v Regulated ac adapter. For best result we recommend using the Big Joe 100mA regulated AC adaptor, Big Joe 1700ma Power Slot adaptor or Big Joe Power Box isolated pedal board power supply.
