## **WARRANTY:**

All Big Joe products are proudly designed, engineered and built in the USA. We hand test, assemble and inspect every stomp box that we ship. If there is ever a problem that is our fault, we will fix it free of charge. If the problem is from normal wear and tear then we will fix it for free but charge you for the replacement parts. If the problem is something you did then we will fix it and charge you whatever it costs to do so. The only thing we ask is that you don't attempt to fix anything yourself. There are no user serviceable parts inside the case. It's that simple. Just register your warranty online or send in the attached Registration Card so we have you on file.

**WAH WAH**

**W-601**

## BASIC OVERVIEW:

The Big Joe Wah Wah is a true bypass, traditional looking, all analog tone monster. The unique three position character switch allows you to select Classic, British or Big Joe resonance ranges. This gives you both of the vintage Wah Wah voicings associated with 60's and 70's rock history and a broader bandpass shaped Big Joe profile for a unique, meaty tone signature. Each setting is custom voiced and centered around a proprietary, vintage spec, custom inductor. And an on/ off LED, uniquely positioned in the footpad, provides clear indication when the Wah is engaged. So inside and out, this Wah is vintage rock'n roll.

## POWER SUPPLY:

All Big Joe products operate with a standard 9v Alkaline battery or tip negative 9v Regulated AC adapter. For best result we recommend using the Big Joe 100mA regulated AC adaptor, the Big Joe 1700ma power slot adaptor or the Big Joe Power Box isolated pedal board power supply.

## LONG LIFE CUSTOM DESIGNED POT:

The Big Joe Wah is a traditional style, foot activated pot design that features a long life custom spec pot. The pot is designed to deliver low noise performance and withstand the rigor of heavy use.

## PROPRIETARY INDUCTOR:

The Big Joe Wah Wah circuit is based on proprietary circuitry and features a custom designed inductor. This allows for each individual unit to be precisely calibrated to ensure tonal consistency.

## CHARACTER SWITCH:

### CLASSIC:

Lower Q and tighter sweep range for a rounder, more traditional sound.

### BRITISH:

Traditional Q and a wider sweep range for an extended, brighter sound.

### BIG JOE:

Lower Q and wider sweep range for a fatter response and a thicker, more meaty tone.
