

User Manual

FEARLESS DISTORTION

Thank you for purchasing your new Daredevil pedal. All hand built in Chicago, IL. Your effect is designed to run on a 9V battery or DC power source, negative pin (ground). Unplug your input cable when not in use to prolong the life of your battery. This pedal is true bypass.

VOLUME - controls overall output of the effect

DISTORTION - controls the amount of gain

TOGGLE SWITCH - selects between high and low gain settings

The Fearless is an op-amp based distortion effect with 2 channels of gain. Low setting will cover warm overdriven tones and builds up to a pushed vintage amp style of distortion. The high setting has more low end and midrange, achieving full and heavy gain as you increase the knob.

For best performance of your effect, use a high quality isolated power source. Any individual wall plug or non-grounded power adaptors may cause unwanted noise.

Warranty info - Inquire with your dealer for their policies on repairs or returns. Daredevil Pedals offers a 2 yr warranty on mechanical parts that are not the result of misuse, modding, or failed repairs by a third party. For further questions or details, you can contact us at [Daredevilpedals@gmail](mailto:Daredevilpedals@gmail.com)
