

User Manual
SILVER SOLO

Thank you for purchasing your new Daredevil pedal. All hand built in Chicago, IL. Your effect is designed to run on a 9V battery or DC power source, negative pin (ground). Unplug your input cable when not in use to prolong the life of your battery. This pedal is true bypass.

LEVEL - controls output level of boost

RANGE - adjusts from full EQ range when CCW to a bright treble boost when CW.

The Silver Solo is a silicon transistor boost circuit with variable EQ range. It sounds best when used first in your effect chain right after the guitar. Great for adding dynamics and edge to your rhythm tone, or pushing output as a solo boost. Can be great as an 'always on' effect for more harmonics and sustain. For best performance of your effect, use a high quality isolated power source. Any individual wall plug or non-grounded power adaptors may cause unwanted noise.

Warranty info - Inquire with your dealer for their policies on repairs or returns. Daredevil Pedals offers a 2 yr warranty on mechanical parts that are not the result of misuse, modding, or failed repairs by a third party. For further questions or details, you can contact us at Daredevilpedals@gmail.com
