

User Manual
SUPERNOVA

Thank you for purchasing your new Daredevil pedal. All hand built in Chicago, IL. Your effect is designed to run on a 9V battery or DC power source, negative pin (ground). Unplug your input cable when not in use to prolong the life of your battery. This pedal is true bypass.

VOLUME - controls master output of pedal

FUZZ - adjusts amount of fuzz gain

DEPTH - controls how much low end is present. CCW is bright and biting, CW is fat and saturated.

The Supernova is a gritty, almost gated sounding silicon fuzz with the gain turned up. Lowering the Fuzz control smoothes out the tone. These can be loud and were designed to allow players to use a fuzz for rhythm tone and leads that cut through.

For best performance of your effect, use a high quality isolated power source. Any individual wall plug or non-grounded power adaptors may cause unwanted noise.

Warranty info - Inquire with your dealer for their policies on repairs or returns. Daredevil Pedals offers a 2 yr warranty on mechanical parts that are not the result of misuse, modding, or failed repairs by a third party. For further questions or details, you can contact us at Daredevilpedals@gmail.com
