

## THE AT

*Andy Timmons signature channel drive. British style overdrive and distortion that will have your guitar singing like Andy's!*

### Controls

**VOLUME** - Controls the output volume.

**DRIVE** - Controls the amount of drive, or gain, just like a tube amp being cranked at high volumes.

**EQ** - High pass filter that naturally brightens or darkens the overall tone of the pedal. Right is brighter, left is darker.

**AIR** - Just like the presence knob on an amp, this allows you to dial in the perfect amount of high end for compatibility with any amp. Right is brighter, left is darker.

**POWER** - Uses 9V DC Negative Center. This pedal CAN be run at 18v for more headroom and greater dynamics. Do not use more than 18V DC. Your warranty will be voided. 100mA consumption.

### Jacks

**INPUT** - Jack on the right side of the pedal.

**OUTPUT** - Jack on the left side of the pedal.
