

ROSS guitar pedals are backed by a one (1) year warranty from the date of purchase. We warrant this product to be free from defects in material and workmanship under normal use. This warranty is limited to the original purchaser and is not transferable. This warranty does not cover loss/theft, damage, caused by misuse, modification, abuse, accident, natural disaster, or unauthorized repair. For full warranty details and service please visit RossElectronics.com.

FULL WARRANTY

The logo features the word "ROSS" in a large, bold, serif font. To the right of the letters "S" and "S" are two stylized, curved lines that sweep upwards and to the right, resembling a signature or a musical flourish. A small trademark symbol (TM) is located at the bottom right of the logo.

LICENSED, MANUFACTURED, AND SOLD BY JHS PEDALS

*Electronic sound effects, precision engineered,
hand assembled and individually tested to assure
maximum performance, and reliability.*

DISTORTION

The ROSS Distortion is an op-amp, hard clipping distortion built around the classic 1970s topology seen in pedals like the MXR Distortion Plus, the DOD 250, and the Proco RAT. While this pedal can be used in almost any situation, it excels at creating natural tube-like distortion and pushing your amplifier into natural breakup.

CONTROLS

“Level” controls volume (right is louder, left is quieter). “Distort” controls the amount of hard-clipping distortion (right is more distorted, left is less distorted). The side switch allows the player to toggle between two versions of the circuit produced during its fifteen-year history: Germanium mode (“Era 2” version) and Silicon mode (“Era 3” version). The footswitch activates the pedal via soft touch bypass switching. The status LED indicates the circuit is active.

JACKS

The ¼” input and output jacks connect to your guitar and amplifier. The power jack accepts standard 9V DC Negative Center power and consumes 40mA.
