HEADPHONE AMP

It's handy. Not complicated. There are some out there. Some to choose from. And yet we still didn't have one. Not until Brian from smallsound/bigsound clued us in on some. A headphone amp that sounds great. That's all it does. Plug in and be the only one to hear what you're playing. Unless someone else plugs into the secondary headphone out. Then you can both listen. And not bother another living soul. Sometimes it is just better to keep it to yourself.

Controls

Volume - Turn counter-clockwise to decrease volume. Turn clockwise to increase volume. Adjust volume when using drive pedals. Or else maybe blow your ears out.

9V DC

Input on Right

Headphone Output 1 on Left

Headphone Output 2 on Left

Don't use in conjunction with another amplifier.
