Crimson Red Bass Preamp (BJF design)

Thank you for your purchase of the Crimson Red Bass Preamp by One Control.

- ***Description:***

The Crimson Red Bass Preamp was designed to reproduce the iconic old school 60s / 70s electric bass sound by giving the bottom end a boost at an extremely low distortion level.

The Crimson Red Bass Preamp allows us to relive the sounds of bass amplification before extreme clarity, thanks to 400W amps and tweeters, was a thing in the bass world. The CRB reproduces the sound similar to a single 15" or 18" setup.

The Crimson Red Bass Preamp can be used as a preamp to modern bass amplification setups while bringing back that old school feel of a 60s upright bass and 70s electric bass.

- ***Controls:***

Gain: Boost control

Brilliance: Bandwidth control. At maximum, treble can pass. Whereas at the most counter-clockwise position, only bass is amplified.

Volume: Adjusts overall signal volume.

Footswitch: Engage or bypass the pedal (Truebypass)

- ***Specifications:***

Input Impedance: 650K

Output Impedance: <2K

Power supply: Negative Center DC (9V-15V) or 6F22 Battery.

Current Draw: 1mA @ 9V

Dimensions: 39(W)x100(D)x31(H)mm 2.41(W)x4.41(D)x1.26(H)Inch

Weight: 160g 5.64oz.
