

# User's Manual

*Mosquito Blender*

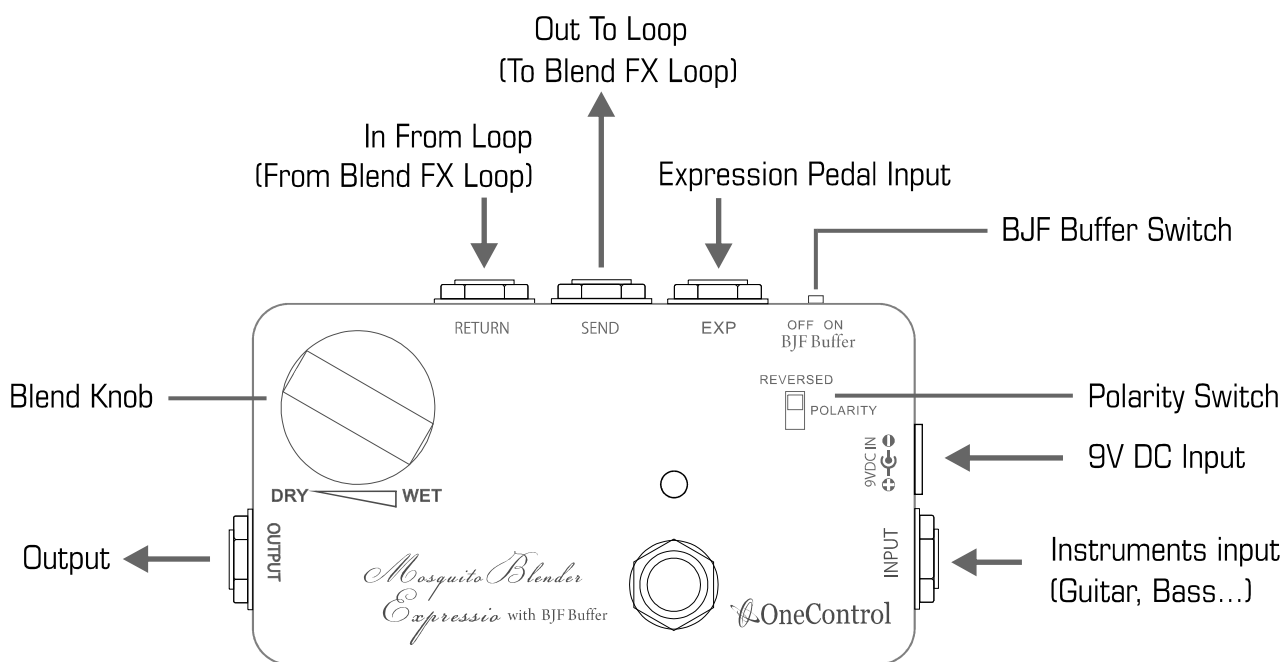

*Expressio* with BJF Buffer

 OneControl

Thank you for your purchase of the Mosquito Blender Expressio by One Control.

The Mosquito Blender Expressio was a direct result of customer feedback. People wanted to be able blend in effects gradually or just be able to have different amounts of saturation throughout a live performance. An expression pedal input was the best solution. With the original blender, there was only a knob available to control the amount of saturation. With the Expressio you can connect an expression pedal to be able to gradually blend or hands free control your amount of saturation. Not only that, the Expressio has a built in BJF buffer. So if you were thinking about getting a high quality buffer, you can take out two birds with one stone by purchasing the One Control Mosquito Blender Expressio.

**USING THE MOSQUITO BLENDER EXPRESSIO WITH AN AMP'S EFFECTS LOOP** Just like the standard Mosquito Blender, the Expressio version can be used with an effects loop on most amplifiers. Since you have the ability to control the amount of saturation while in front of the amplifier, this is a great tool for fine-tuning your amp's tone during soundcheck or recording sessions. **USE WITH OR WITHOUT AN EXPRESSION PEDAL** Even though you have the option to blend in effects with the expression pedal input, the Expressio version has a knob also so you can control the amount of saturation just like you would the standard blender. This means for only a bit more than the standard Mosquito blender you can add on expression pedals options and still have all of the same functionality as the normal Mosquito blender.

## Specifications

INPUT: 9 Volt center negative 6mA

DIMENSIONS: 122(W)x65(D)x50(H) mm (with jacks)

WEIGHT: 175g

## Warranty

Repairs or exchanges under warranty are subject to these warranty
