

Features:

BUZZ BEE functions as both a buffer&boost pedal.

For musicians using pedals, as the number of pedals in a chain increases, high-frequency signal loss will occur. simply turn the gain to near its minimum and keep the stomp running. Obviously, A line buffer can solve this problem.

As a booster, it provides excellent clean boost up to the 1 o'clock position. Once the gain is turned up to 1 o'clock, the boost becomes much more aggressive, reaching a maximum of 25dB, which can make your amp or distortion pedal much more powerful.

Specifications: Adaptor: DC 9V Input & output impedance: 1M/10K

Current: 8mA N.W.: 260g

WARRANTY SERVICE

Thank you for choosing TONECITY products, this pedal is granted two years' limited warranty. Please show this fulfilled effective card or a picture of this card when you ask the warranty service.
