## User's Manual

### Xvive Bass Squeezer Overview

"Arguably, the single most beneficial stomp effect pedal a bass guitarist can acquire is a compressor. However, mastering the art of using compression effectively can be frustrating and many perfectly adequate pedals get cast aside as a result. Xvive have come to the rescue with a pedal that takes all the pain out of compressing your signal and provides even the most technically challenged bassist with an instant pro quality hiss-free squashed signal."

### Operating The Bass Squeezer

"The Bass Squeezer is idiot-proof! Engage the effect with the bomb-proof stomp switch, blend the amount of compression you desire into your bass signal with the "Compression" control and adjust the "Volume" control to suit your needs. You may wish for the effected signal to match the volume of your bass when the pedal is switched off. Alternatively, you may wish to use the pedal as a boost or even cut the volume. Whatever your compression needs are - the answer is here in a tiny, armageddon-proof box. As an added bonus, this pedal comes complete with an optional overdrive circuit. Simply flick the switch to on and dial in anything from a subtle edge to a dirty overdriven amp sound with the "Overdrive" control."

"In short, this is a versatile pedal that is easy to use and will revolutionise your bass sound."

### Instructions

**True Bypass Footswitch:** Switches between bypass and engage.

**On/Off LED:** When lit, the compression effect is engaged.

**DC In:** Connect a 9 volt DC regulated AC adapter, centre pin negative.

**Input:** 1/4" mono audio jack from your bass guitar into the pedal.

**Output:** 1/4" mono audio jack takes the signal from the pedal to your amplifier.

**Volume Knob:** Adjusts the volume of the effected signal.

**Compression:** Blends the compression into your signal.

**On/Off:** Engages/Disengages the overdrive circuit.

**Overdrive:** Adjusts the intensity of the overdrive.
