APPEARANCE AND SKETCH

Features & Functions

- 1) FOOT switch
Pressing this switch will turn the tuner on/off.
- 2) INPUT jack
Connect the output cord of the instrument to the input jack of tuner. the input jack also functions as a power switch. When a plug is inserted into the input jack, the power will be turned on. When the plug is pulled out, the power will be turned off. When you are not using the tuner, pull the plug out of the input jack.
- 3) DC 9V in jack
If a DV adapter is used, you will be able to play for extended periods without worrying about battery life. at the same time to charge the battery.
- 4) OUTPUT jack

Connect your Amp or another effect unit to this jack.
When the tuner is off, this will output the signal of the instrument connected to the input jack. NOW is the situation under TRUE BYPASS.
When the tuner is on, no sound will be output from this jack so use this jack if you wish to tune silently.

5) PITCH button

This button lets you change the reference frequency. 7-segment indication of 0~5 means 440~445Hz, and indication of 6~9 means 436~439Hz.

6) FLAT button

This button lets you use flat tunings.

- Normal tune
- Detuned half a note
- Detuned a full note
- Detuned one and half a note

Procedure

1. Connect output of the instrument to the INPUT jack of tuner, the power will be turned on.
2. Press the Foot Switch to turn the tuner on.
3. Press the PITCH button to select the reference frequency you want to use.
4. Press the FLAT button to select the reference flat you want to use.
5. Adjust the instrument until the tuning note you wished to tune is indicated on FND Tuning Note.
