R-402

CLASSIC

Gain: Controls input gain

Tone: Controls response of upper frequencies

Output: Controls the Volume

Contour: ... Switches between 2 differently styled cab simulations

Footswitch: Turns effect On and Off

LED: Indicates status

Input: Connect your instrument here

Output: Connect further effect or amp

,Texas Flood'-style grit with thick, chunky harmonic saturation. Two position toggle lets you engage speaker simulation circuitry that models speaker box loaded with large drivers giving you a more smoothed out frequency response. This box has more gain than the Vintage tube boxes and plenty of mid-range bite that really cuts through the mix. It is your classic overdriven tube amp sound.
