

Dunes

Hey bud! Welcome to your new Dunes! The Dunes is a condensed version of our highly popular Palisades; a heavily featured take on the classic 808 overdrive. It features the same Gain, Tone and Level controls along with our favorite voice and bandwidth settings as well as the “Normal/Bright” toggle. The selectable voices are: “MOSFET” for a tight crunchy sound (Setting 3 on the Palisades), “Silicon” for the classic 808 sound (Setting 5 on the Palisades) and “None” which goes from clean boost to gritty, pure opamp distortion with a massive volume boost (Setting 1 on the Palisades). The two bandwidth settings are “stock” for the classic tone (Setting 3 on the Palisades) and “full range” for more low end (Setting 5 on the Palisades). The Dunes has all the great tone of the big boy Palisades but with a simplified interface and a smaller footprint!

Controls

Gain: Adjusts the drive, dirtier clockwise, cleaner counter-clockwise

Tone: Brighter clockwise, warmer counter clockwise

Level: Sets the output level

Normal/Bright: Normal is a warm full tone, Bright is livelier tone with more chime

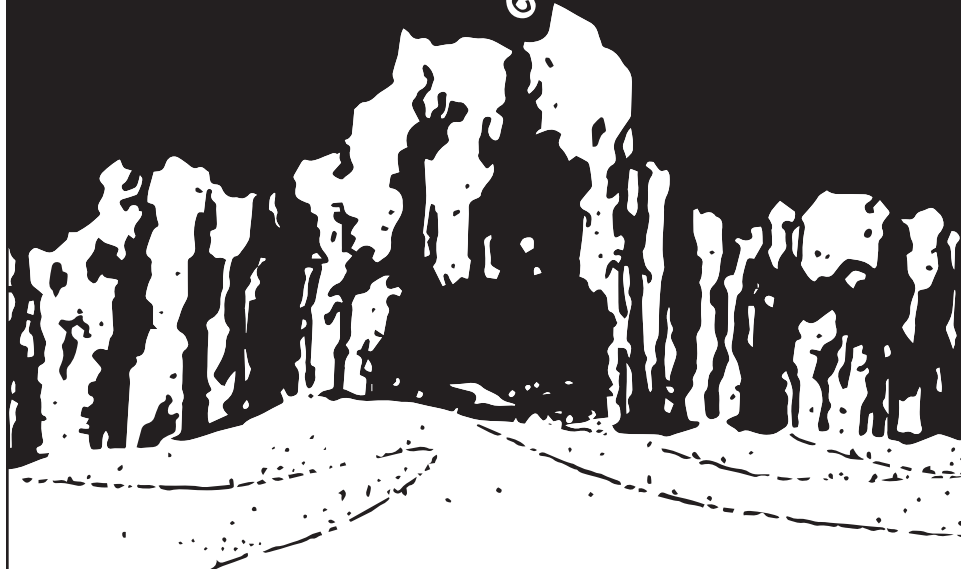

Bandwidth: Left is brighter with more emphasis on the mids, Right is full range for more low end

Voice: MF- MOSFET diode clipping, N- No diode clipping, Si- Silicon diode clipping

Power

A standard 9 volt DC power supply intended for musical instruments with a negative center 2.1mm barrel.
