

Thank you for choosing Ivy - sister midnight - our high gain distortion pedal. We are sure that by following the simple instructions outlined in the next few pages you will enjoy years of high octane distortion glory. Please read on to discover how to get the best from her. Be sure to peruse the section about pedal registration. Simply register online and automatically gain the extended warranty - plus you'll be in to win some truly excellent prizes..... Bliss! Best Regards, Ben Fulton (Owner and inventor)	Initial Charging..... Such a simple process..... Step One Locate a DC, 9 volt power adapter with the tip negative (Boss PSA, Voodoo Labs Pedal Power II, Godlyke Power All - pretty much any 9v guitar power supply), connect the 2.1mm plug to the power socket on the left hand side of Ivy. Step Two The LED closest to the top of the pedal should be glowing red. Leave her charging for 12 hours - the LED will change from red to green - indicating that charging is complete. Following this initial long charge she will only need 4 - 6 hours for future charging cycles.	The Controls..... 	A -Volume control - this sets her overall volume. B -Output socket. C -Charge indicator LED Red = charging Green = charged Flashing = battery failure (replace battery immediately). D -Input Socket. E -Gain Control - this sets the distortion level. F -Status LED Red = pedal engaged. G -True bypass footswitch Stomp on here to engage the pedal. H -Power input - 2.1mm 9 volt DC, tip negative You can run Ivy with the adapter plugged in.	First time..... (After completing the initial 12 hour charge) Plug your guitar into the input socket (D on Diagram). Plug your amp into the output socket (B on Diagram). Set Vol at 1 o'clock position and Gain at 5 o'clock position. Step back. Step on Footswitch. METALARAMA!!! Dial up your own preferred blend of metal mayhem! Note: Always pull the plug out of the input socket when not in use - this turns off the battery = weeks and weeks of battery life from one charge!

Caring for Ivy..... Clean her with a soft cloth, allow no abrasives near her lovely body. Over time her art work may wear off, be prepared for this: Ensure you have enough canned goods and fresh drinking water. The Lithium ion battery inside her should last around 2 years. To change the battery, simply remove the four screws on the back plate, unclip the old battery and plug in the new one. Replacement batteries are available from your favorite Red Witch store. Do not treat her rough - this includes immersing her in beverages, rewiring her, setting her on fire or using her as a weapon. She's tough, but everything lasts longer with a little love.	Warranty..... All electronics carry a lifetime warranty providing the owner purchases the pedal new and retains proof of purchase. All switches, jacks, potentiometers and other mechanical parts are warranted for one year after the date of purchase or for four years if the pedal is registered online (see last page of this manual). This is non transferable. All external fixtures, finish, lettering and knobs are not warranted. Damage or failure of product due to misuse will void the warranty. All repairs must be made by Red Witch authorized repair agents only. No user serviceable parts inside. Unauthorized repair/modification will render warranty void - in the unlikely event that she has a problem - let us fix her! warranty@redwitchanalogpedals.com	Register her..... Simply go online and register your pedal to gain an instant 4 year extended warranty. www.redwitchanalogpedals.com By registering you gain access to our members only Red Witch forum and the opportunity to win free pedals & other treats! That sounds rather good? Yes!!  Be sure to join "like" us on Facebook - more opportunities to win free pedals, stickers, t-shirts and other delightful goodies. http://www.facebook.com/RedWitchPedals  We're on Twitter: http://twitter.com/RedWitchPedals		 INSTRUCTIONS
