

# SLAMMIN' HORSEPOWER

- ✓ 550 ms Of Big Natural Echo Sound
- ✓ Volume control for Level matching Or Boost
- ✓ Hand built in the USA
- ✓ Abuse resistant steel case
- ✓ Completely snob approved!

## HOW TO MR ECHO

**OUTPUT** -- Plug in amp or effect you plan on using after the MR ECHO in here....Reverb units sound great here. Output impedance is less than 10k.

**9VDC** -- Plug in 9 volt DC adaptor in here for power. It will bypass the battery when plugged in. Current draw is 36ma max. Pay close attention to the Polarity!! Use regulated power adaptor.

**INPUT** -- Plug your guitar or effect you plan on using in front of the MR ECHO in here. It works best towards the end of the effects chain. Plugging in here also turns the battery on Input impedance is over 1meg.

**DELAY** -- Sets the delay time range. from 30ms to 550ms

**REPEAT** -- Controls the number of echos from one repeat to infinite.

**SLAM** -- It's a momentary switch that when depressed sets the delay time to 30ms and adds extra repeats, higher REPEAT control settings will give runaway echos. It returns to normal when your foot is removed.

**VOLUME** -- Sets the overall output level. Use to match the volume or as a very slight boost

**MIX** -- Sets the balance between the echo and straight signal. 12:00 setting is a 50/50 mix.

**BYPASS** -- Switches effect in and out of the signal path. The LED will glow when activated.

Warranted for one year from date of purchase
