

MIND BENDING

HORSEPOWER

- ✓ Four stage optical vibrato
- ✓ Two Rate controls that can be swapped with a foot switch
- ✓ Hand built in the USA
- ✓ Abuse resistant steel case
- ✓ Completely snob approved!

HOW TO VIBROMATIC

9VDC--Plug in a regulated 9 volt DC supply here for power. It will bypass the battery when connected. Current draw is 20ma. Pay close attention to polarity!!!

OUTPUT-- Plug this into your amp's input or whatever you plan on using after the VIBROMATIC. For a vintage sound use before distortion and overdrive pedals. For a mechanical sound use after. Output impedance is less than 10K.

INPUT-- Plug your guitar or whatever effect you want to use before the VIBROMATIC in here. Input impedance is greater than 1 meg.

RATE 1 and 2-- Controls modulation speed. The RATE SWAP switch toggles between RATE controls.

RATE SWAP-- Switches between RATE controls.

VIBROMESH-- Feeds a portion of the signal back to different points of the circuit to add a little trem to the vibrato. CCW for trem, 12:00 for normal and CW for a tiny bit of phase.

DEPTH-- controls the intensity of the effect. 12:00 setting is minimum. CCW setting gives a mild traditional modulation. CW settings gives a more dramatic asymmetrical modulation.

LED-- illuminates when the effect is active. LED pulses indicating rate speed.

BYPASS-- Activates and bypasses the effect.

Warranted for one year from date of purchase
