- ✓ Two separate effects in one package
- ✓ It's an octave fuzz and fuzz. Each of which can be used together or separate.
- ✓ Hand built in the USA
- ✓ Abuse resistant steel case
- ✓ Completely snob approved!

## HOW TO NICK NITRO

**OUTPUT**-- Plug this into your amp's input or whatever you plan on using after the NICK NITRO

**9VDC**-- Plug in a regulated 9 volt DC supply here for power. It will bypass the battery when connected. Current draw is 20ma. Pay close attention to polarity!!!

**INPUT**-- Plug your guitar in here, it works best with no other effects in front of it

**VOLUME**-- Sets output volume of the fuzz and over all volume when both the effects are engaged.

**TONE**--The tone control is a thin-o-fat knob. CW is fat CCW is thin. Works only on the Octave effect.

**FUZZ**-- Sets the amount of distortion.

**VOLUME**-- Sets output volume of Octave fuzz.

**FUZZ**-- Bypass for Fuzz. LED is red when activated

**LED**-- It's a tri-color LED. Green is octave, Red is fuzz and amber is both.

**OCTAVE**-- Bypass switch for Octave fuzz. LED is green when activated.

Warranted for one year from date of purchase

**SiB!**
