

Radial Cabbone order # R800 7086

Radial Cabbone EX order # R800 7087

Imagine what your 2 x 12 combo would sound like if it were sent through a 4 x 12 cabinet. Now imagine being able to switch between those speaker cabinets during a performance as effortlessly as stepping on a footswitch. The Cabbone makes it possible. Cabbone is a speaker cabinet switcher designed to switch the output of a 100 watt amplifier and toggle between any two speaker cabinets.

Cabbone is safe for your amp. Speaker switching is accomplished with high performance sealed relays for the most transparent sound. The relays are controlled by a digital timing chip that maintains a safe speaker load on the amp through the transition from one cab to the other. The SafeMode™ feature will automatically revert to speaker-1 output should the power be disconnected.

To make the Cabbone really effective we added Slingshot, a simple remote control that works with 1/4" guitar cables. The Slingshot input lets you control the Cabbone from a remote switch, a MIDI switching system, or from another Slingshot-equipped product. This allows the Cabbone to be placed close to the amp, to keep speaker cables short, and be triggered from your pedalboard. The Cabbone's Slingshot output allows it to trigger another device, such as amp channel switching. The Cabbone is made for the guitarist looking to harness the tones of real speakers, on stage or in the studio. Also available, the Cabbone EX, for amps up to 300 watts.

Features

- Noiseless and transparent cabinet switching
- SafeMode™ power-off safety system
- Slingshot™ remote control input & output
- Handles different speaker impedance loads
- EX version for high-power amps up to 300 watts

Applications

- Switch between two speaker cabinets with one amp
- Use one speaker cabinet for rhythm sounds
- Use another speaker cabinet for lead sounds

Cool Factor

- Won't mess with the tone of your amp
- Slingshot simultaneously switches amp channels
- Slingshot reduces tap-dancing on the pedalboard
- SafeMode reverts to speaker-1 if power fails

Dimensions (W x D x H)

- 6.8" x 4.5" x 2" (170mm x 114mm x 52mm)
- Includes 15VDC power supply
- 3 Year transferable warranty

SLINGSHOT OUTPUT
sends latching or pulse signal for old and new amps.

Connect your head's speaker output to the Cabbone here.

Alternate input for amps with multi-impedance outputs.

SLINGSHOT INPUT
lets you control the Cabbone with an external footswitch.

Connects to your 1st speaker cabinet.

Connects to your 2nd speaker cabinet.

Lets you toggle speaker cabs with the internal footswitch or from any remote switch.

Heavy-duty 14 gauge steel construction for maximum wear & tear.

Heavy-duty footswitch with full-size LED status indicators.

Cabbone Setup with Slingshot Input

Slingshot remote allows the Cabbone to be located near the amps and be switched by a remote footswitch on your pedalboard. There's no need to run speaker cables out to your pedalboard.

Cabbone Setup with Slingshot Input and Output

The Slingshot output can re-transmit the status change command received from the remote footswitch to an amplifier head allowing simultaneous amp channel and speaker cabinet switching.
